SIMBRAH World

Market Demands

The market demands quality in the cattle business today and that's why we have taken many steps to acquire functional, high quality individuals with proven and desired genetics and phenotypes.

When you demand quality, look to 7N, we have what the market demands.

We have lots 133-142 selling in the Simbrah Synergy X Sale, Sept. 23rd—check out the quality we are offering.

2016 National Grand Champion Percentage Bull. He's a son of Steel Force and out of the International Champion Female, Smith Ciao Bella, who is a daughter of Nu Approach and the great Bella Bella. He currently ranks in the top 2% of the breed for API and Tl. We are using him heavily in our herd and we are excited about the calves and new blood he is adding to Simbrah.

This is a full sister to RFI Lady Charm, the 2014 International SHE SELLS IN Reserve Grand Champion Female and she sells in Synergy. She's a daughter of Smith Specialist and her dam, Stelleto is a Charismatic daughter-this means if you go back one more generation you will see Sargeant and Nu Wave II, which is recognized as the "magical mating" in the breed. She sells open and you can add the magic to your herd with her.

SMITH WHITS MISS AMAZING

We added this purebred, homozygous polled Simmental to use in both our Simmie and Simbrah programs. She's a daughter of Smith McCrary Andy Black and goes back to Built Right on the dam's side. Her pedigree includes Dream On, Triple C Amazing and a dose of the Ebonys Antoniette cow. You'll want to see her progeny. Check out her daughter, selling as Lot 35 in Synergy.

Pete Nieschwietz P.O. Box 330 • Falls City, TX 78113 (956) 460-6002 • pjnieschwietz@sbcglobal.net www.7nranch.net Ranches located in Donna and Falls City

That's why we're breeding quality today. That's why we're breeding quality today.

We've made some very calculated moves to take the quality of our program to a higher level and we would like to tell you about those acquisitions.

We have joined
Hallak Ranch in the ownership of PRR Revolution that has some very impressive EPD rankings. We also purchased the pick of the Pine Ridge bull calves and our choice, PRR Unanimous Decision has created a lot of excitement. Both of these bulls have great EPDs, are super thick, dark red

and blaze-faced.

Monte Christo is proud to be part of this event See our Lots—100-104 September 23rd!

We've also acquired the Mossy Creek herd from Kevin Kent. He emphasized high performance, strong fleshing ability, as well as maternal qualities in his breeding program of diverse genetics.

We are very excited about the calves we have on the ground from our sires, Smith McCrary Fireball and RFI Red Raider. A daughter of Fireball that we raised was the second-high seller at the International Sale in Houston this year.

We're making moves today to be ready for the future.

New Foundation Lines

We've recently added these three young Simmental females to our young donor lineup. They will be used to strengthen our Simmental program and develop new lines within our Simbrah herd. Cow families have always been our foundation and these three have all the potential to build their own line. Watch for their influence in Simbrah!

CMFM Gracie 107B-daughter of Steel Force and the Gracie donor featured at Circle M Farms and sired by Built Right.

WLE Smith Reba D24-daughter of WLE Uno Mas and the Buttercow cow featured at Wesner Livestock and sired by Lock Out.

WLE Smith Missy C493-double bred daughter of the immortal Shawnee Miss 770P, dam of Uno Mas, Revolution, Big Deal and Twang.

American Junior Simbrah Roundup held

The American Junior Simbrah Roundup held this summer drew a record number of exhibitors and cattle. Ninety-four exhibitors and 143 head of Simbrah cattle were on hand in Crescent, Texas for the annual event. It was the largest to date and full details, photos of all contest winners and a com-

plete list of champions can be accessed at www.simbrah world.com under the junior news tab.

Thank you to AJSR Sponsors

This year's American Junior Simbrah Roundup featured prizes for 1st-10th places in all the educational contests for all three divisions. Dean Fuchs and team put together an impressive set of awards for our juniors. Thank you to the following sponsors who made that possible:

Top C Cattle Company, Muddy Waters Cattle Co., Joe B. Rodriguez/La Morra Ranch, Rafter M Cattle Company, Mike & Paula Lanier, Littlefoot Cattle Company, Knezek Simmental/Simbrah Ranch, LMC Daydream Partners, David and Pat Boenker, Victor Guerra, Rene Vela Family, La Muneca, 6G Ranch, IGS Cattle Co/Brolaco Cattle Co., Kallie Kram/Glenda Stavinoha, Lost Cause Ranch, KF Livestock, LPJ Ranch, Simbrah World, Hallak Ranch, Shoppa's Farm Supply - R Jedlicka, La Reina Ranch, Laura Guerra Ramirez, Law Office, James Cano Family, Hewitts Cherokee Ranch, Dustin Black and McCrary Farms.

New hand at Fields Cattle

RAISING THE BAR FOR QUALITY

We have been in the Simbrah business for decades and we continue to make purchases and mating decisions that raise the bar on the quality.

We added Smith Detonator as our predominate herd sire to incorporate the blood-lines of Smith Satisfies and Smith Bella Bella, as his dam is Smith Ciao Bella. In addition to the proven bloodlines and appealing phenotypes, he is delivering desired EPDs as his API is in the top 4% of the breed and his TI is in the top 10%.

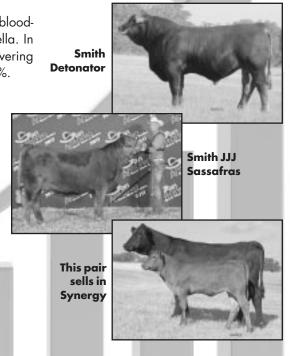

Smith JJJ Sassafras exemplifies the quality we are achieving. She's a daughter of Satisfies and out is out of a three-quarter, Smith Matt N Black bred dam. She has an API ranking in the top 5% of the breed and her TI is in the top 1%. In addition, she was the 2017 National Reserve Junior Champion Female. Watch for her impact in our herd.

SIMBRAH SYNERGY X, SEPT. 23. OUR LOTS ARE 118-125.

This pair sells. The cow traces back to the great She Moves and Evan and the fancy heifer calf at side is by Detonator. She sells bred back to Detonator. Join us at the event for great cattle and our Raos Bakery breakfasts both days!

Donor Power...

She has the magic mating of Nu Wave II x Sargeant and she was the 2009 San Antonio Grand Champion Female. She has many functional, high quality daughters in production. She ranks in the top 10% of the breed for API and 1% for TI.

She is a member of the Priceless Cow Family, as she is an own daughter of the matriarch herself and is sired by Smith Nu Approach. We are breeding this purebred several different ways in embryo transfer. She's top 35% for API and top 20% for TI.

OUR LOTS ARE 143-148
Four daughters of Inspired sell!

SMITH MCCR HONEY MOO 111C

This three-quarter x one-quarter female is entering our donor program after a successful show career for Hallie Hackett, in fact she finished on a high note as the 2017 MAS Reserve Grand Champion Percentage Female. She's a daughter of WHF Devil's Cut and is out of Smith Moving Up, who is a maternal sister to Smith JJJ Dancing Moves, a high seller at the 2014 Simbrah Synergy. She has a heifer calf at side by Smith Trendsetter, and she is now entering our donor program. She ranks in the top 2% of the breed for API and top 4% for TI.

She joined our program after our nephew, Zach, showed her to many championships and she has made an impact! Nuanced is an Andy daughter, going back to a Trendsetter bred dam. She is a three-quarter blood and her current rankings show her in the top 3% for API and her TI is top 5%. She already has to her credit, Smith RFI MCCR Gangster, a young sire that has lots of potential in the breed. Her females have the same overall power as she does with lots of body and a big flat hip! We are flushing her to a number of sires for purebred and percentage babies.

(Continued from page 9)

the 2017 Texas Cattle Feeders Association (TCFA) Junior Fed Beef Challenge.

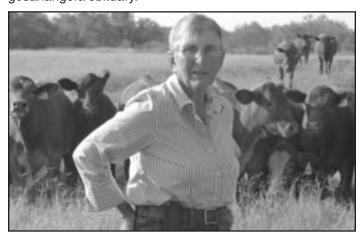

This annual contest allows students age nine through graduating seniors the opportunity to gain industry knowledge and practical experience in commercial cattle feeding. Students feed a pen of three steers and compete on their knowledge of the industry through a written test and an interview or oral presentation, depending on their division. Cattle performance points are also figured into the score to determine the winners of more than \$20,000 in prizes, premiums and college scholarships.

The overall champion of the contest and winner of a \$5,000 scholarship, a plaque and trophy buckle sponsored by Zoetis was Amelia. In the junior division, Leroy was named the overall champion, receiving a \$200 prize, a plaque and a trophy buckle sponsored by Merck Animal Health. This was a repeat win for both Amelia and Robert, as they were both overall champions in the 2016 Junior Fed Beef Challenge.

TCFA represents the cattle feeding industry in Texas, Oklahoma and New Mexico. Known as Cattle Feeding Country, this area is the largest cattle feeding region in America and annually markets about 6 million fed cattle -28 percent of the nation's fed cattle production. To find out more information about TCFA, visit www.tcfa.org.

Remembering Sally Buxkemper

The Simbrah breed lost a great advocate, breeder, friend and mentor in the passing of Sally Buxkemper in March of 2017. She was very involved in the American Simmental Association, American Junior Simmental Association, as well as the Texas Simmental/Simbrah Association and the Texas Junior Simmental/Simbrah Association. Memorials may be made to the American Simmental Association Foundation, One Genetics Way, Bozeman, Montana 59718, as a special fund has been designated in her honor. For more on Sally's life visit http://www.legacy.com/obituaries/gosanangelo/obituary.

Simbrah Synergy X set for September 23-24th

Sale host Tim Smith announced that Simbrah Synergy X will be held the fourth weekend of September. The date for the tenth annual event will be the weekend of September 23rd and 24th. It will include a sale, a junior show for qualifying heifers, showmanship and educational contests. For additional information contact Smith at 512/587-7896 or smithgenetics1@gmail.com.

Simbrah breeders meet in Houston

Simbrah breeders held their annual meeting during activities at the Houston Livestock Show and Rodeo, Simbrah President Wavne Reavis welcomed the crowd and introduced Bill and Jane Travis as recent recipients of the Golden Book Award from the American Simmental Association (ASA) in Denver, Trustees Fred Schuetze and Tim Smith updated breeders on ASA programs, financial information and upcoming events. The group also discussed scheduling a five-year planning meeting in 2017. Wayne Johnson and Sam Hodges were elected to the board positions as two terms expired. Officers elected by the board for the coming year include Reavis, president; Jane Travis, vice-president; Hodges, secretary; and Johnson as treasurer. Committee advisors for the year include Joe Hensgens for activities, events, booth and hospitality; Johnson for fundraising; Hodges will direct the publication committee; and Travis over growth and development.

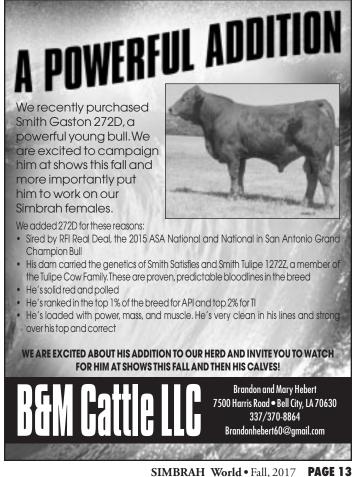

Alamo Group announces fall sale dates

The Alamo City Simbrah Fall Online Sale will be Sept. 18-20 on www.cattleinmotion.com. Sale chairman, Joe B. Rodriguez says show prospects will be featured. Cattle will sell from the Baring, Freasier and La Morra programs. For additional information contact Rodriguez at 210/275-0839.

INVOLVED AND PASSIONATE

By Martha Hollida Garrett

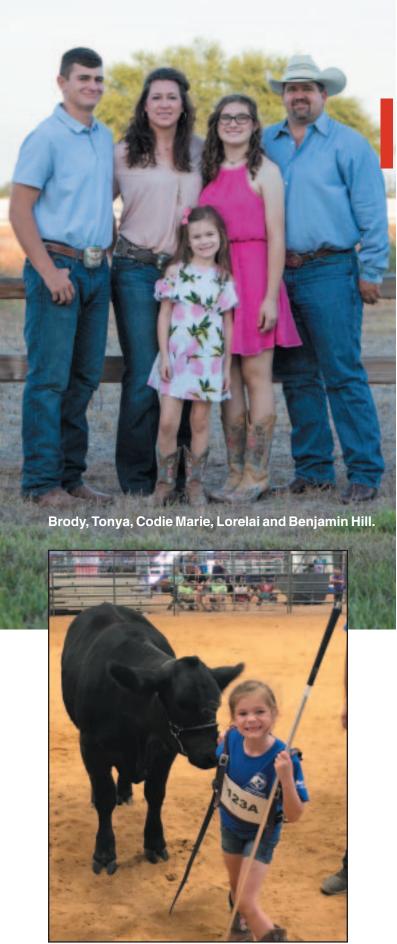

There's been two consistent things since high school for Benjamin and Tonya Hill—agriculture and each other. Today, this young couple and their three children are building a registered Simbrah program, taking an active role in the breed and making a living through diversified agricultural careers. They are passionate about agriculture and feel it's important for their children to understand the industry.

While their story starts as high school sweethearts in the small county of Liberty in deep southeast Texas, they now reside in Linn, Texas, with children, Brody, Lorelai and Codie. They have 35 head of registered Simbrahs, operating under their ranch name, Brolaco Cattle Co. Brolaco is a combination of their children's names.

"Benjamin was a junior and I was a freshman when we met through FFA at Hull Daisetta High School, a small 2A school between Houston and Beaumont. He was already a member of the Texas Junior Simmental/Simbrah Association (TJSSA) and was showing Simmental heifers. I was competing in the leadership contests such as livestock judging, speaking and was on the land judging team that competed at state," recalls Tonya. She said that Benjamin had her showing Simmental heifers before she graduated as valedictorian of her class and that both of them capitalized on Houston Livestock Show and Rodeo Scramble Certificates.

Benjamin was drawn to agriculture long before high school, as his grandfather's commercial cattle herd was just three miles down a backroad from his parent's home. In high school, he would also judge cattle and land, compete on the parliamentary procedure team and was a National FFA Runner-up for Cereal Grain Production Proficiency award.

Both obtained the FFA State Farmer and American Farmer Degrees. They realized early that their involvement in FFA and showing helped prepare them for the "real world." They are adamant that their kids have those leadership experiences offered through 4-H, FFA, TJSSA, and sports.

Codie Marie Hill is still two years away from official showing, but she's enjoying the peewee showmanship competitions.

Benjamin started college at what is now Texas A&M at Kingsville, and would finish his ag economics with farm and ranch management degree at Texas A&M, College Station in 2000. They married in 1999, when Tonya graduated from high school. She studied finance at A&M.

They are passionate about agriculture and feel it's important for their children to understand the industry

Upon his college graduation, they, along with baby son, Brody, moved to southern California.

"I took a position as an assistant manager of an irrigated sod farm, which was in the middle of what seemed like a desert covered in tumbleweeds," he said, adding that it was a long way from Texas.

"In retrospect, moving out there was one of the best things we did as a young couple. We both had grown up with extended family very close and when we got out there, all we had was each other, Brody and our jobs," Tonya shared.

About 18 months later, they returned to Texas after Benjamin took a position with the Texas Prison System in Brazoria in their crop division. Two years later, in May of 2004 with another baby in tow (Lorelai), they made the move to the Rio Grande Valley and 13 years later it appears to be very permanent.

At that time, both went to work for a large family-owned citrus company. In fact, it was the largest citrus grower overall and largest, most premier onion producer in the Valley.

Benjamin was involved in the farming side of the business (Continued on page 16)

Lorelai Hill campaigned RFI Razen very successfully to many championships on the state level. This Smith Satisfies daughter is now in embryo transfer for the family operation.

Sound, functional, low maintenance cows are the kind you will find in the Brolaco program.

The Hill family made their first Simbrah purchase at a MAS Sale a few years ago and have now built their herd to 35 females. They have incorporated bloodlines from a number of programs.

Brody Hill is shown at the halter of a bull purchased from La Muñeca Cattle Co. He carries Red Moves and Power House breeding.

Passionate...

(Continued from page 15)

and Tonya joined the sales department.

After the family owned company sold to a large corporation, they decided that they wanted something different and something to call their own, which was always a lifelong goal for Benjamin.

That was five years ago and Benjamin, who had been farming some on his own on the side, decided to take the leap and begin his own business. Today, he farms grain sorghum and corn, oversees a custom harvesting crew and has a small custom trucking business. Tonya now works for Amazon Produce Network, a company that specializes in importing mangos and represents a number of growers from several Central and South American countries

"It was a great opportunity for me, but the tropical division presented me with commodities I had not previously marketed. I work with mangos and limes and oversee the packing and shipping of these crops and I have had to learn the regulations. It's been very challenging, but very rewarding and it's allowed me to work from home, which is huge with all the activities of the kids. I'm accustomed to my phone ringing at all hours with a shipping issue," she shared.

Under Tonya's leadership as regional manager, her team has generated tremendous growth for the company in the sale of mangos and limes over the past few years.

Their youngest daughter, Codie Marie, joined the family in 2010. Not long after that, they acquired their first Simbrah. Brody, then in junior high, wanted to make the move from hogs to cattle. Mom and Dad were also ready for the move to cattle, as they were recalling their show experiences and the leadership contests of the TJSSA.

They attended a MAS Sale and went home with a Simbrah heifer for Brody to show. Now, five years later, they have a herd of 35 Simbrah females and the two oldest kids are showing on a local and state level and competing in a number of leadership contests in 4-H, FFA and TJSSA.

Their purebred and percentage Simbrah herd has the breeding of several programs including La Muneca Cattle Co., Reavis Farms, Smith Genetics and RGV Cattle Co. They have just added Smith RFI Black Sails, a three-quarter son of Steel Force and the highly acclaimed Smith Priceless. They own him in partnership with the Reavis family. They utilize AI as a way to continually improve their herd.

Brolaco also joined MAS three years ago as a way to market some of their genetics and to gain name recognition within the breed.

"We have developed a great friendship with the Rene Vela family and Wayne Reavis. They have been invaluable to our program. Both have provided us with great information and advice and we're looking forward to sharing some genetics in the near future," explained Benjamin.

Their young program has already produced a champion for junior customer Melanie Evans, who purchased a Brolaco bred heifer. She would have twin calves at her side when she claimed the 2016 Fort Worth Junior Simbrah Show Grand Championship.

"We had experienced the junior programs ourselves, but

as we initially looked at breeds for the kids to show, we knew from the get go that SimGenetics was the best route to go for them and that the Simbrah breed was a great fit for our environment," Tonya said.

It wasn't just Brody and Lorelai who got involved, as Codie's days are still two years away, but Benjamin and Tonya. They are not spectators at events, as they can always be found helping do this, do that, organize this, help any and all exhibitors and provide leadership themselves.

In 2013, after attending the summer shows, Tonya loaded up some of the young Simbrah exhibitors from the Rio Grande Valley and brought them to College Station, Texas for three days in August. They attended the Texas A&M Beef Cattle Short Course youth segment as a way to learn more about the beef industry.

Three years ago, Tonya and Benjamin, along with the Bennie Cano and Vela families, spearheaded Cow Camp Palooza, a camp for young exhibitors from the Valley. The goal was to prepare for the TJSSA Futurity American Junior Simbrah Roundup (AJSR) and that year the American Junior National Classic was in Texas.

"We patterned ours after what Tim Smith has done for 25 years with his cow camp and the Freasier family in the Floresville area," she said.

This year the camp drew 30 youth of multiple breeds. The exhibitors received a binder full of cattle terminology, production, nutrition, reproduction and health information, and there were stations for public speaking, livestock judging and skill-a-thon, as well as a showmanship clinic.

This year, Dean Fuchs, AJSR lead advisor asked them to help with fundraising for that event and they gladly accepted the challenge. They are also joining Roundup as advisors for the 2018 event.

They have seen tremendous growth in their children due to participation in SimGenetic contests, as well as the work responsibilities of having cattle and farming.

Brody was the 2016 Animo Award winner, which is presented by the Guerra Family at Roundup, and he serves on the TJSSA Board of Directors. He's a member of the National Honor Society, leads the Linn-San Manuel 4-H Club as president, is the reporter for the Edinburg North FFA Chapter and participates in the Texas Farm Bureau Leadership program. He plays the position of defensive end for his high school football team and is listed on the South Texas Senior Top Watch List in Texas High School Football. He is currently fielding offers to play football at the college level.

Lorelai recently claimed the third high individual honor and belt buckle at the AJSR, serves as treasurer for their 4-H Club, is a member of the Junior National Honor Society and Duke Talent Identification Program. She also enjoys sports and plays volleyball, basketball, golf and track. She will be playing for the South Texas 14U Elite National Volleyball Team this coming year.

Agriculture in general and Simbrah specifically are in need of young families like the Hills. Their love, involvement, commitment and passion for the industry is contagious. They will testify it provides a great backdrop to instill valuable work ethic, character traits and opportunities in their children.

Working with livestock can be a lot like driving on a roundabout.

Follow The Flow

Animal handling expert shares tips for effectively moving cattle.

By Kindra Gordon

"Stockmanship to me is like a highway roundabout," says Curt Pate, a well-known livestock handling specialist. He explains that those circular intersections make people think as they navigate through the curves and outlets. Likewise, Pate says, "Stockmanship while working with livestock is kind of a roundabout. You've got to think. It's tough. It's a skill."

Regarding the value of stockmanship, Pate notes, "It's not only about working animals; it's about understanding animals. You need to be able to look at animals and know if they are content —if they have what they need."

He adds, "The more you think and work at it and analyze your efforts after you get done working with a group of livestock, the better you'll become. And, it'll improve your quality of life and improve our quality of beef."

Pressure points

Regarding cattle movement, one of

Pate's fundamental techniques is the use of pressure. He says, "Pressure is what stimulates animals to move," and uses the analogy of a storm that prompts animals to move forward to seek shelter.

He explains, "It's all about putting yourself in the right place at the right time with the animals to give the right amount of pressure, and then releasing animals to do what you've asked them to do."

He notes that in some situations, such as moving cattle into a

chute or semi-trailer, more pressure may be needed. He emphasizes that you do not want to panic the animals, but you may need to increase the pressure being applied to keep them moving.

He shares, "When cattle are too gentle, it makes them more difficult to move." As well, he says, "I'm not against hot shots. I think they are one of the most humane tools we have if they are used properly."

But he also cautions against too much pressure and putting cattle into a panic mode. He explains that when you are working with an animal, you are working with their brain. He describes the animal's brain as having two sides: a thinking side and a surviving – or reaction – side.

"Animals use the thinking side in instances like grazing. They are deciding what to do and what to eat," says Pate.

Conversely, he describes the survival mode as an animal in panic – something really scares them. Signs include the head of the animal rising up, their eyes widening, their tail raising and they are looking to get away.

"In survival mode, they are not thinking, they are reacting. If animals are in survival mode too long and stressed so much, their immune system can shut down," says Pate.

Recognizing this, Pate says that the first lesson a good stockman learns is to never stress an animal to the point of shifting them into survival mode. "If an animal does reach that point, you've got

"It's all about putting

yourself in the right

place at the right time

with the animals to

give the right amount

of pressure, and then

releasing animals to

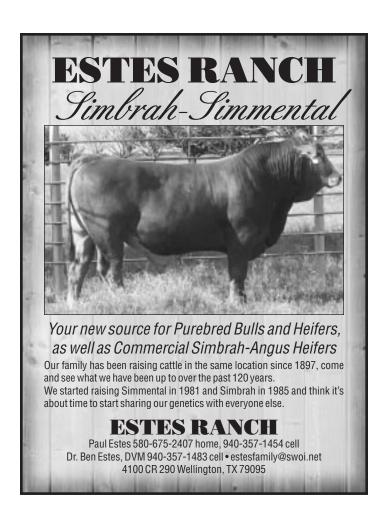

do what you've asked

them to do "

to back the pressure off," Pate says.

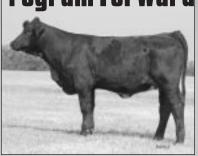

Additionally, Pate points out that animals have an incredible memory. He says, "We've got to remember, any negative things we do to animals, they never want to get in that situation again." Even sound can cause a negative experience that can stress animals. "Bull whips and rabble paddles get animals not to trust us," Pate

She Has The Potential To Move A Program Forward

We're offering this female (and two more) in the upcoming Simbrah Synergy X Sale. This heifer, RFJJ Real Moves, is a daughter of RFI Real Deal and out of black full sister to She Moves. In addition to her proven genotype, she has an impeccable phenotype, balanced EPD profile, capped off with a top10% ranking for API and

Ti. She sells in the sale as lot 105 and she can move a program forward.

We also want to introduce our new herd sire, Smith RFJJ Established. He's a $3/4 \times 1/4$ son of Smith Stout N Black and his dam is the 12W cow, who is a member of the Irreplaceable Cow Family. He's red and polled and has a top 1% ranking in the breed for API and top 2% for TI.—Watch for him!

Richard and Betsy Foster and Richard III P.O. Box 88 • Floresville, Texas 78114 713/412-4487 (Richard III) Or 713/412-4480 diamond rf@peoplepc.com

Let BADMEDICINE Work For You!

RGV Enigma, a Bad Medicine daughter.

Congratulations to Ava Vela for all your success with RGV Enigma. Enigma is a Bad Medicine daughter that is extreme in volume and capacity. We look forward to more success with her this upcoming show season! Thank you to all our recent buyers: Armando Reyes, Jacob Saenz, Diego Padilla, Diego Balderas, Tatiana Betancourt, CJ Renteria, Emeri Drewry, Dr. Ramiro Caballero, Dr. Adalberto Garza and Marshall Curl. Also, a huge thanks to Jody Matejicek, from Lost Cause Ranch for purchasing Bad Medicine semen at the Simbrah Roundup. He will work for you!

For information on Bad Medicine or our cattle, please contact us

Here they are... the next generation of BON PONE

We're excited about these young ladies and the potential they hold for the breed.

We emphasize maternal strength and cow families every day...

these gals show you why that's important.

SMITH PERRY PURE JOY 19B ~
A daughter of William N Black. Top 1% ranking for
API and top 10% for TL Owned with the Perry Family.

SMITH BURCH CHEERFUL 643D ~
A three-quarter daughter of our Devils Cut sire and
out of the Golden Glory Cow. Ranks in the top 10% for API
and top 5% for TL.

SMITH 7N NICE DREAMS $52C \sim$ A polled purebred daughter of Satisfies and she traces back to the 50 Cow. We own her dam with 7N. 52C ranks in the top 3% of the breed for API and top 10% for TL.

SMITH CRC NU KEEPSAKE 110D ~ Chloe Novak owns this next generation of the Keepsake Cow Family. She's a polled purebred daughter of Nu Approach. Ranks in the top 15% for API and 3% for TL

SMITH MCCR HONEY MOO 111C ~
A polled percentage daughter of Devils Cut and our
Moving Up danar, who is a She Moves daughter.
A top 2% ranking for API and 4% for TI.
We own her with McCrary Farms.

RFI MISS DEBUTANTE. ~

This female is writing her own chapter in the Toponga Cow Family as she has Sweet Deb, a National Champion and Dazzlin Deb to her credit.

Owned with Reavis Farms. Top 10% ranking for API.

ro III as well for purchasing her full brother.

MAS Showcase

June 24 Crescent, Texas Judge Darrell Pitchford

Sponsors 5W, 6G, BETM, La Morra, La Muneca, La Negra, LPJ, Monte Christo, RGV, Reavis Farms, Smith Genetics, Top C and Brolaco.

Amelia Stavinoha exhibited the MAS Calf Champion. Sponsored by 6G Ranch and sired by LMC Gold Medal.

Jake Williams exhibited the MAS Reserve Calf Champion. She is sired by

LMC 6G Red Rock 5Y/203. Sponsored by La Muneca.

MacKenzie Groce exhibited the Reserve Junior Champion at MAS. She is a daughter of LMC Gold Medal 5Z/75 and sponsored by La Muneca.

Jane Hunt exhibited the Reserve Senior Champion Female at MAS. She was sponsored by Reavis Farms and Smith Genetics. She is sired by RFI Real Deal.

Jane Hunt exhibited the Reserve Grand Bull at MAS. He is sired by LMC Arcadio 5X/116 and sponsored by La Muneca.

Hallie Hackett exhibited the MAS Reserve Champion Percentage female. She was sponsored by Smith Genetics and is a Devils Cut daughter.

Mandi Lee exhibited the Junior Champion at MAS. She went on to be named the Grand Champion and winner of the \$2,500. She is a daughter of LMC Gold Medal 5Z/75 and sponsored by La Muneca.

Robert Stavinoha exhibited the MAS Champion Percentage Female. She is a daughter of Rolling Hill Endeavor. She was sponsored by La Muneca.

13-14 Years-Old Showmanship winners (L to R, 1st-10th):Madison Culpepper, Lorelai Hill, Mia Barba, Leah Thibodeaux, Robert Stavinoha, Barrett Novak, Natalie Martinez, Gabie Herpin, Trevor Jenkins, Luke Dorat.

Jennifer Mask exhibited the Senior Champion and Reserve Grand Female at MAS. She received \$1,500. The heifer was sponsored by La Muneca and sired by LMC Gold Medal 5Z/75.

8-10 Years-Old Showmanship winners (L to R, 1st-10th): Carlos X Guerra III, Ryan Pena, Harper Mau, Gavin Hinckley, Matthew Sanchez, Jennifer Mask, Mia Ramirez, Xavier Martinez, Emme Dees, Rory Die.

15-16 Years-Old Showmanship winners (L to R, 1st-9th): Hannah Wells, Amelia Stavinoha, Jaden Butler, Jacob Friedrich, Brittany Koehl, Cole Mau, Cameron Young, Caleb Richardson, Dalton Schmidt.

Graceann Mullins exhibited the Grand Champion Purebred bull at MAS. He is sired by LMC Justice 5Y/121 and sponsored by La Muneca.

11-12 Years-Old Showmanship winners (L to R, 1st-10th): MacKenzie Groce, Ava Vela, Jake Williams, Hallie Hackett, Cooper Mau, Haley Bryand, Ryleigh Whitaker, Makayla Sanchez, Gabi Ramirez, Grant Hinckley.

17-18 Years-Old Showmanship winners (L to R, 1st-11th):Hunter Wells, Mandi Lee, Winston Walters, Hayden Hackett, Alexander Garrison, Jane Hunt, Graceann Mullins, Trevor Jenkins, Brody Hill, Caitlyn Miller, Callie McGinley.

Balancing mineral needs

By Travis Meeter, University of Illinois Extension

Have you ever watched a person walk a tight rope? The balance and precision that it takes to make it from one side to the other is incredible. Focus and attention must be combined with talent and practice. If any small thing goes wrong... balance can be lost and the goal of making it across is gone.

Mineral nutrition is a balancing act, too. It is very delicate and much more fragile than other nutrition tasks, such as meeting protein and energy requirements. Minerals must be provided to the animal in a BALANCE. When minerals are not balanced, problems can arise. Low levels can lead to deficiency. High levels can lead to toxicity. Matter of fact, high levels of one mineral can cause a deficiency in another.

Sources of minerals in the diet

Minerals enter the animal primarily through feed, water, and supplementation. While it is easy to understand that your mineral feeder full of mineral supplement is a source of mineral, many times cattlemen ignore the minerals that are available to an animal in the feed and water.

In order to better understand what minerals your cattle are ingesting, you should test your feedstuffs and even your water source. If you are certain mineral imbalances are affecting your herd, you can discuss this with your local veterinarian and they can draw blood or take liver biopsy samples to identify mineral deficiencies.

Mineral interactions

I personally believe this is a problem in many cattle rations and many times is holding cow performance back. Producers that are trying to push performance higher need to take a look at what may be causing mineral interactions in their cattle diets.

Mineral interactions can result in one mineral restricting the bioavailability of another. Thus, reducing the amount of that mineral absorbed by the animal. This can lead to deficiency. Another way to put this is an excess can cause a deficiency.

One of the most common mineral interactions in beef cattle is the interaction between calcium and phosphorus. Generally, calcium and phosphorus levels are recommended in a ratio (Ca:P). Ideally, a ratio of 2:1 is targeted. Cattle can handle slightly lower Ca:P ratios, however when the ratio becomes inverted, or more phosphorus is provided than calcium, steer cattle can be at risk of urinary calculi (also known as water belly). A prolonged period with a Ca:P imbalance in young cattle can interfere with bone growth and decrease overall performance.

Certainly the Ca:P ratio is important to monitor. Many corn by-product feeds are high in P. In cases of high levels of Ca and P in the diet, other mineral requirements for magnesium, manganese, iodine, sulfur, iron, and zinc will all increase. Remember the key to proper mineral nutrition... balance.

The relationship between copper, iron, molybdenum, sulfur, and zinc is another crucial mineral interaction. These minerals can all influence the bioavailability of each other. High levels of zinc, iron, molybdenum, or sulfur can all interfere with copper availability. Copper deficiency is one of the most common mineral problems across the country.

Do you have hard water? Are your cornstalk bales dirty? Did your hay field (Continued on page 28)

Recognizing the stages of calving

By Lindsay Allen

There are many factors to determining the profitability of a cow; her phenotype, genetic make up, environment and much more, but at the end of the day, if there is no live calf on the ground, the former isn't worth much. When it comes to dystocia and assisting in a difficult labor, it is important to be aware of the process and how to help, in addition to knowing when to call for help, to help ensure a live calf and healthy mama cow.

Labor can be broken into three stages, with stage one possibly lasting as long as 24 hours. "The biggest thing happening in stage one is the dilation of the cervix and while we can't witness that taking place, there are behavioral changes we can look for and observe," Dr. Glenn Selk, Emeritus Extension animal scientist at Oklahoma State University, said.

"When calving gets close, the female will normally move away from the herd to look for a place to calve; often in a pen of calving heifers she can be found in a corner. In the pasture, she is often under a tree or deep in the brush. If calving difficulty is anticipated, females need to be moved to an easily accessible area for observation and, if necessary, for assistance. The calving female may lie down and then get up; she will move around and perhaps frequently look at her side as contractions occur," added

Dr. Joe Paschal, professor and Extension livestock specialist with Texas A&M AgriLife Extension.

Selk noted that it can be tricky to observe cows in stage one as some will express these behavioral changes, like kicking at their stomach, pacing the fence line and isolating themselves, but not all will. "The udder dropping and filling out is a good sign of labor to come, but the time frame estimation after this happens is not reliable. Calving could be anywhere from two weeks to two hours after the udder and teats descend," Selk said.

Heifers will usually exhibit more signs and for a longer period than cows, especially cows that have had several calves. "As the cervix dilates and uterus contracts, the first and largest water bag, the allantochorion ruptures. In about half of calvings it pushes through to the opening past the vulva and is seen as a dark amber bag, full of gallons of amber or straw colored fluid. This is followed by the amnion, a white sac filled with clear fluid," Paschal said. Birth normally occurs within 30 minutes to four hours after the appearance of the amnion or the front feet of the calf. "Any disturbance of the cow (movement to a pen or chute) at this point can delay the process by reducing contractions and increasing the time required for delivery. It also reduces the chances for a live calf. If the calving female is to be moved for observation or assistance, do it early," Paschal recommended.

During this first stage, the body of the cow is preparing for labor; the ligaments of the pelvic region are relaxing and allowing the area to expand, producers might notice a sunken look around the hooks to pins region and may notice mucus from the cervical plug leaving the body. All signs that stage two, where actual birthing happens, is approaching.

"How long stage two will last is the multi-million dollar question. Producers want to know when a cow needs help and how long they should wait before calling help. This is when I get my watch out and pay attention to the clock," Selk said.

Research shows that, on average, a heifer will remain in stage two for right at 55 minutes and cows will complete stage two in about 23 minutes. Obviously, there are calvings that last shorter or longer of these averages, but using these as a rule of thumb can help cattlemen gage the progress.

"As I'm watching a female and she passes the half hour or one hour mark, but her labor is progressing, I don't get too worried and I let Mother Nature continue its course; it's when no progress is being made after an hour that I would start calling a neighbor, teenage son or vet to possibly be on hand," Selk commented.

Paschal said it is important to be ready to assist the cow, but not speed up the process. "The calf can survive a lengthy calving process since the placenta has many sites of attachment to the cow's uterus and can supply the calf with oxygen and nutrients for several hours. Allowing the cow to progress at her own pace also allows for the cervix to fully dilate, reducing the risk of tearing the uterus or injuring the cervix. However, the amnion or calf's feet should appear within 2 hours of the beginning of this stage," he said.

When stage two is complete, the calf will be on the ground. To get to this point, cowmen may find themselves in a position where assistance is required. While there is no way to guess what issues may arise in the future for every operation, there are some signs that are signals for help in stage two.

"If you have the skills to examine a birthing cow, remember that sanitation and lubricants are musts. Do not use soap as a lubricant, but OB lube, mineral oil or vegetable oil with an OB glove. When you are examining a cow, you should be checking for a dilated cervix, a live calf (by sticking a finger in the mouth or anus of the calf), the presentation (head or tail first), position (right side up or down) and posture (head between the front feet or a head back, etc.)." Paschal continued, "From here you can tell if assistance will be needed or not based on your findings and awareness of your own skill set."

While time is of the essence, it can also be dangerous to try and assist without the proper knowledge and training. If you are capable of providing assistance, you want to make sure the cervix is dilated and ready for the calf to deliver.

If you find that calf is coming backwards, timing is very important. "When you have pulled a calf far enough that the tail head is visible, you need to have an understanding of the umbilical cord which is the calf's source of oxygen. Once you have pulled the calf far enough and either pinched the umbilical cord or pinched it off completely, the calf will be unable to receive oxygen because the nose is still in the fluids. This means you have four minutes, on average, to get the calf on

the ground and clear it's nose to allow it to breathe," Selk said.

At times, a calf may need to be moved or rotated to help it pass through the pelvic area, but again, this should only be done with a clear understanding of the process to prevent damage to the cow. "If the calf has really big hips or the heifer has given up, the widest part of the pelvic opening is on the diagonal, therefore rotating the calf 45 degrees to the left or right will place the hips at the widest part of the pelvis." Paschal continued, "A breech presentation is one where the calf's back or belly faces the opening, like a log across it. The calf has to be pushed back in and then moved into a head or tail first position."

Calves that have been born with assistance need to be checked to make sure they are breathing normally, have no fractures in their legs from incorrect placement of chains or the use of extreme force in pulling and that they can stand within an hour of birth and nurse, added Paschal. "Sometimes it is beneficial to take a dry towel and clean and dry them off while the cow is recovering. Vigorous drying can increase blood flow to the calf and its extremities," he said.

Selk recommends tickling the calf's nose with a stiff straw if it's not breathing, to cause it to sneeze and/or cough and use the diaphragm and lung muscles. "You want to clear the mouth and nose of mucus and I always tell cattlemen to be very cautious about hanging a calf over a pipe rail fence, thinking that they are draining mucus by hanging the newborn by its flank for a few minutes," he said. "It's counterproductive as most fluids are in the stomach area and when you hang them like that, you are pinching the diaphragm and keeping the calf from doing the very thing you want him to do--which is to use those muscles. You want the calf to pant and have rapid breathing, this is a natural reaction to intake more oxygen and rid the excess carbon dioxide and allow the blood oxygen level to return to normal."

The final stage of labor, stage three, is the expulsion of the "afterbirth," composed of the fetal membranes, placenta and remains of the water sacs. If the afterbirth is not passed within eight hours after delivery, a veterinarian should be consulted for treatment, Paschal noted. Selk added that while there maybe a temptation to manually pull the afterbirth if it is partially hanging out, this could cause damage to the uterine lining and again, a veterinarian should be brought in to possibly provide a prostaglandin to help pass the afterbirth.

When it comes to reducing calving difficulty, sire selection is the number one predetermining factor. While some believe that feeding cattle too much during gestation could lead to issues, research proves that there are more issues with underfed cattle during labor as they fatigue sooner, birth a weaker calf, do not provide as much or as high of quality of colostrum and rebreed at a slower rate.

Having awareness and knowledge of the calving process can help you, as a producer, know when to step in and help and when to call a veterinarian, in the event that help is needed.

Mineral needs...

(Continued from page 25)

get flooded before you cut and baled it? These are all likely suspects for more iron in your cattle rations. Iron is really good at reducing the availability of crucial trace minerals.

Are you feeding distillers grains or CCDS? These feedstuffs are higher in sulfur. High sulfur levels in the ratio will bind trace minerals, especially copper. Cows that suddenly have red tinged hair coats are likely experiencing copper deficiency.

Selenium deficiency is a problem in Illinois. Selenium and Vitamin E are generally used in conjunction to supplement against Se deficiency. This is because both Se and Vitamin E work along the same lines in the body to prevent hydroperoxides. Administering Se and Vitamin E together is a good supplementation strategy to combat Se deficiency.

Solutions and summary

Producers can utilize minerals that incorporate organic forms or chelates to help resolve major issues with mineral interactions. Injectable minerals are also a potential solution. However, the key is to know what is deficient and how that deficiency is occurring. Your vet will be able to test for deficiencies. Getting rid of an excess will be much more economical than purchasing expensive minerals.

When formulating your mineral nutrition program it is crucial that you are aware of these mineral interactions. Understand that feeds and water can be playing a major role in mineral nutrition of your cattle. Excess can cause deficiency.

Follow the flow

(Continued from page 20)

says.

Vision important

What's the most common mistake livestock handlers make? Pate says it is when people walk behind the animal (or the herd) and try to push them forward. He blames society for this approach, saying, "Society makes people get in line. It's programmed into our brains to get in the back of the line and then move forward. So, when we work livestock, we do the exact same thing."

But, once you recognize that cattle's range of vision is different than humans, you will quickly realize that walking behind the animal is the wrong approach, says Pate.

He explains that because animals' eyes are on the side of their head, they can see a wide area - almost 360 degrees when their head is down for grazing. But, their vision is not very precise. As a result, when a person approaches, the animal will turn its head to look. Pate says, "As you come up to the center of the animal's eye, you are more in focus to them. But when the animal turns its head, it also must change its direction."

Thus, Pate's rule for handling cattle is to place yourself where the animal can always see you. He says, "I don't try to work the whole animal; I try to work the animal's nose."

He explains that where the animal's nose points toward, the rest of the body usually follows. "If you can always see that nose, the animal can see you," says Pate.

Pate likes to work at a 45 degree angle from the front of the animal. He calls this the focus point (another industry term is balance point), saying, "That's when they start listening to you." For each animal and depending on the environment, the focus point can be different.

He gives the example of sorting cattle, and explains, once the animal sees you with both eyes, as you step forward, the animal will begin to move. If you step back, they'll stop - or, if you move out of their focus point and they must turn their head to see you better, they will turn away.

Pate adds, "If the animal starts to move the wrong way, you must stop and step back and start over. Then move forward where she can see you better."

As the animal begins to move forward in the desired direction, walk with them, says Pate - but not from behind. Instead, walk along their side in a zig-zag pattern like a border collie.

If the animal is not moving in the right direction, he reiterates, "Always be willing to stop and start again."

Mood matters

As a final tip, Curt Pate emphasizes that the mood of the people working the cattle can influence their movement and reactions. He says, "I believe cattle can read people better than we can read them."

He tells the story of a producer who was mad while sorting cattle and the cattle would not go by him. Pate says, "Fear, anger, whatever it is that is affecting your mood, cattle pick up on that. So it is real important to keep your attitude right while working with livestock."

Bull Power + Maternal History "The 6G Kind"

6G Rapunzel is a dynamite spring born, LMC Gold Medal daughter that won Amelia the calf division at AJSR. This female traces back to LMC Blueberry that was a Superbowl Champion heifer for her cousin, Jordan. She epitomizes the cow power that we strive to achieve at 6G Ranch.

LMC 6G Shiny Gold is a spring born heifer that the Jedlicka Family will campaign this fall and next spring. She is a maternal sister to the Mullins' Champion Bull, 6G Golden Boy! This LMC Gold Medal daughter may be the deepest and thickest heifer we have ever raised at 6G. Look for this female to make waves this spring at the shows.

Could he be the next big thing in the Simbrah breed? He is bred to be successful! His sire is the champion, LMC Gold Medal, and his dam won Houston for Camille. 6G Gold Standard has been one of our more consistent producers already putting two heifers in the winner's circle, and her newest, spring born is definitely a herd sire prospect!

6G Adella is proof of our continuing desire to advance the Simbrah breed. Robert's Champion Percentage Heifer and MAS and Reserve Percentage at AJSR is sired by Rolling Hills Endeavor and out of his LMC Tanva cow. This female adds new genetics in a tremendous phenotype. Look for her in the future!

We still have a great selection of show heifers available at the ranch including this 1st generation power house. This February heifer is sired by our JF Rancher son and out of a 1/4 x 3/4 cow from La Muneca. Do not hesitate to call and take a trip to look at the gems we still have available.

Many thanks to the Davis Family for selecting this dynamite percentage calf as a steer prospect for Houston. He is loaded with muscle, bone and eye appeal! This guy could make some real noise at the majors this spring!

RIO GRANDE VALLEY

THE BIRTHPLACE AND CAPITAL OF SIMBRAH

The RGV is the source for the most Simbrah cattle in the USA within one hour of each other. RGV breeders are here to serve all of your female and bull needs whether it be one or a truckload. If we don't have it, we can sure help you find it and have a good time doing so. Many of Simbrah's leaders are from the RGV – from the late Bud Wentz helping start the breed in the late 60's to La Muñeca starting their annual Jr. Educational Round ups in the late 80's to the first Simbrah steer show in the early 90's and MAS in the early 2000's, you can count on RGV breeders to MAKE THINGS HAPPEN for Simbrah.

We are proud that this Smith McCrary Fireball daughter that we sold in the Houston was the second highest selling lot in the 2017 International Sale in Houston Come see us at Monte Christo.

This fancy Smith Detonator daughter sells in Synergy. Her pedigree is loaded with breed greats. She qualifies for the Synergy Showcase and the Superbowl. Come see us at 7N Ranch.

Vela Cartle Co. is proud to add LMC Rosie 5D-169 to our herd. She offers NEW BLOOD to Simbrah being sired by Mr. HOC Broker & a daughter of +LMC LF Ambassador & the famous Dream Girl. 7N Ranch-Donna Nieschwietz Family 956-460-6002 phileschwietz@sboglobel.net

DRIVEN TO SUCCEED

In most breeds we measure success by Champions, Pedigree and Progeny.

By Champions we mean 2017 National and International Champion Simbrah Bull,

SEVEN Years of Champion or Reserve National and International Champions Combined!

By Pedigree we mean Genetic Power Players.. BCC/CHCC Powerman,

SCC Queen Anne, BCC Betty Boop, BCC Shady Lady, who have produced some of

BEST cattle in the Simbrah breed today!

By Progeny we can only SAY that you come see for yourself..THEY ARE AWESOME!

Selling Limited Semen Shares and Progeny in our Alamo Sale!!!

es a priority at Reaves Farms.

It's not enough to have registered cattle for our family—we want our registered Simbrah/Simmental programs to be of the highest quality. It's a philosophy we live by every day and dictates every mating decision. Here are three individuals that are representative of our quality first priority. We invite you to visit us and see how our philosophy extends to the whole herd.

We are using Smith CRC Lubbock heavily in our program and will have many calves by him arriving this winter. Lubbock is a product of Satisfies and the three-quarter donor, Bella Vive. We chose to use this built for several reasons and one that really moved him to the top of our list was his top 1% in the breed ranking for API and top 2% for TI.

REAVIS FARMS, INC.

WAYNE AND JIM BOB REAVIS (956) 585-6831 • (956) 207-1447, Wayne cell 6801 W. Mile 7 Road • Mission, TX 78574 www.reavisfarms.com • JWReavis@aol.com

Roards Farms to a diversified family farm, rubing cattle, autous, watermoleus, smillewers, grain sergions and cetten.

This is a daughter of our sire, RFI Bad Medicine. Enigma has been a very successful show heiler for Ava Vela. She was the champion of the RGV Junior Show and reserve champion in the RGV Open Show. Bad Medicine is a product of William N Black and our donor, Expressive—who has to her credit Lorelai Hill's many time champion RFI Razen and Jane Hunt's National Champion, RFI Smith Faith. We own Bad Medicine with RGV Cattle Co. and we're selling semen on him—call us for details on this young sire.

Mark your calenders for Simbrah Synergy X September 23-24

We will be offering this bred female at Synergy—she exemplifies our quality priority perfectly. She's sired by Fireball—giving you the genetics of Satisfies, Dream On and Priceless and maternally there's Charismatic and the Little P Cow Family. She's bred to Devil's Cut, who is producing some born burners. Join as at Synergy, September 23rd and see 563C and our other lots.

CONGRATULATIONS & A BIG HEARTY THANKS !!!

and our list of buyers continues to grow. The future is bright as we continue to strive to make CONGRATULATIONS to our LMC Jr. Team on all of their wins this year and A BIG HEARTY **THANKS** to all of our buyers for their continued support. Our Simbrah continue to get better these cattle more practical, productive and profitable for the COMMERCIAL COWMAN.
